BAGONG PILIPINAS

CC 101 – Introduction to Computing

Laboratory Worksheet No. 1 | Week 3: Computer Components I – Hardware (CO2)

"Know Your Machine": Exploring the Computer Unit You Are Using

Name: Ariana kate L. Balaoro **Section:** BSCS 1-1

Computer Unit Used (Desktop/Laptop, brand): **Desktop** **Date:** 09/16/2026

I. Objectives

At the end of this activity, you should be able to:

- Identify the major hardware components of the computer unit you are using and describe the function of each.
- Use built-in Windows 11 tools to inspect and record your computer's technical specifications.
- Distinguish between input, output, processing, and storage devices on an actual working computer.
- Document your exploration accurately and reflect on what you learned.

II. Materials Needed

- A computer unit running Windows 11 (school laboratory PC or personal laptop/desktop)
- This worksheet (printed copy, or the digital file to fill out and submit)
- Optional: smartphone camera, to photograph the physical unit and ports for your own reference

III. Background

Every computer, whether a desktop tower or a laptop, is built from hardware components that fall into four general categories: input devices (send data into the computer, e.g., keyboard, mouse), output devices (present processed data to the user, e.g., monitor, speakers), the processing/storage unit (CPU, RAM, and drives that compute and hold data), and ports/peripherals (connectors that link external devices to the system unit). Windows 11 also provides several built-in tools — Settings, System Information, Device Manager, and Task Manager — that let you inspect these components without opening the case. This activity uses both direct observation and these software tools.

IV. Procedure

Part A – Physical Inspection (5–10 minutes)

1. Examine the computer unit in front of you. If it is a desktop, look at the system unit (tower/case); if it is a laptop, examine the whole chassis.
2. List all the input devices you can see or that are built in (e.g., keyboard, mouse, touchpad, webcam, microphone).
3. List all the output devices you can see or that are built in (e.g., monitor/screen, speakers, headphone jack).
4. Locate the available ports on the unit (USB-A, USB-C, HDMI, audio jack, Ethernet/LAN, power, etc.) and note what each one is typically used to connect.

Part B – System Identification (Settings)

5. Click Start → Settings → System → About.
6. Record the Device name, Processor, Installed RAM, Device ID, and System type shown under Device

specifications.

7. Scroll down to Windows specifications and record the Edition, Version, and OS build.

Part C – Detailed Hardware Check (System Information)

8. Press the Windows key, type System Information, and open it (this runs the msinfo32 tool).
9. On the System Summary page, record the System Manufacturer, System Model, BIOS Version/Date, and Total Physical Memory.

Part D – Device Manager Exploration

10. Right-click the Start button and choose Device Manager.
11. Expand at least six (6) categories — for example: Display adapters, Network adapters, Sound/video/game controllers, Disk drives, Keyboards, Mice and other pointing devices, and Universal Serial Bus controllers.
12. For each category you expand, write down the specific device name Windows lists (this is the exact model of that component in your unit).

Part E – Performance and Storage Check (Task Manager)

13. Open Task Manager (Ctrl + Shift + Esc) and click the Performance tab.
14. Record the CPU name, base speed, and number of cores; the total Memory (RAM) and its speed; and the Disk type (HDD or SSD) and capacity.

Part F – Software Snapshot (Optional / Bonus)

15. Go to Settings → Apps → Installed apps. List five (5) installed applications and classify each as System Software or Application Software.

V. Data and Findings

Table 1. System Identification Summary (Parts B & C)

Item	Your Findings
Device name	DESKTOP-4MKSC1R
Processor	12th Gen Intel(R) Core (TM) i5-12400 2.50GHz
Installed RAM	16.0 GB (15.8GB usable)
Device ID	635A5817-6B5D-4DD7-BDBI-0BD91DB6852E
System type (32-bit / 64-bit)	64-bit operating system, x64-based processor
Windows edition	Windows 10 pro
Windows version	22H2
OS build	19045.5011
System manufacturer	Micro-Star International Co., LTD

Item	Your Findings
System model	MS-7D48
BIOS version / date	American Megatrends International, LLC, A. E0, 1/11/2024
Total physical memory	15.8 GB

Table 2. Physical Components Observed (Part A)

Component Observed	Type (Input/Output/Storage/Processing/Port)	Description / Observation
Monitor	Output	The monitor displays images, text and videos and other information from the computer.
Keyboard	Input	The keyboard use to type letter, numbers and other information.
Mouse	Input	The mouse move the pointers, the pointers help to access program, and interact to computer.
USB port	Port	Used to connect devices
Headset port	Port	It is port where you can connect the headset, so that you can hear the sound
Audio port	Port	Connects earphone, speakers to the computer for better use of audio
CPU	Processing	It is a processing unit which help for the computer to function properly.
HDMI port	Port	Connect the computer to a monitor, TV and projector.
Cooling Fan	Processing	It helps the computer to stabilize the heat and to prevent over heating.

Table 3. Device Manager Findings (Part D)

Device Manager Category	Specific Device Name Listed
Display adapters	Intel(R) UHD Graphics 730

Device Manager Category	Specific Device Name Listed
Network adapters	Realtek PCIe GbE Family Controller VirtualBox Host-only Ethernet port WAN Miniport (IKEv2) WAN Miniport (IP) WAN Miniport (IPv6) WAN Miniport (L2TP) WAN Miniport (Network Monitor) WAN Miniport (PPPOE) WAN Miniport (PPTP) WAN Miniport (SSTP)
Sound, video and game controllers	HD Audio Driver for Display Audio HD Audio Driver for Display Audio High Definition Audio Device
Disk drives	TEAM T253256GB
Keyboards	HID Keyboard Device
Mice and other pointing devices	HID-compliant mouse
Universal Serial Bus controllers	Generic USB hub Intel (R) USB 3.20 eXtensible Host Controller – 120 (Microsoft) USB Composite Device USB Root Hub (USB 3.0)

Table 4. Software Snapshot (Part F, Optional / Bonus)

Installed Application	Classification (System / Application Software)
Google chrome	Application Software
Microsoft edge	Application Software
Adobe Photoshop	Application Software
Feedback Hub	Application Software

Installed Application	Classification (System / Application Software)
3D Viewer	Application Software

VI. Realization (Reflection)

In two to four sentences each, answer the following in your own words.

1. What did you discover about your own computer unit that you did not know before doing this activity?

I discover the different information inside the computer like the display adapters and other device manager category. Also, I discover the different physical component of a computer, and their description.

2. Which hardware component do you think matters most to how your computer performs, and why?

For me, the monitor because it is a component where we can view different information inside the system of a computer.

3. How might knowing your computer's hardware and software specifications help you as a future IT/CS professional?

As an CS student, knowing the computer's hardware and software will help me to identify their uses and their category, how its affects the program and the system of a computer. I was also able to understand their different part in the computer.

4. What difficulties, if any, did you encounter while completing this activity, and how did you resolve them?

Finding the information in the computer, but I resolve them by trying to research it in the search bar.

VII. Scoring Guide

Criteria	Description	Points
Completeness	All tables (1–4) and required fields are filled out.	30
Accuracy	Recorded specifications and device names match what the tools actually show.	30
Realization / Reflection	Answers are thoughtful, specific to the student's own unit, and well written.	30
